

User Acceptance Testing (UAT) Template

Date	24 August 2026
Project	Employee Raise Issue – Record Producer & Service Portal Integration
Marks	4 Marks

Application Summary

Application Title

Employee Workplace Issue Submission – ServiceNow Portal

Purpose of the Application

This project provides a ServiceNow-based interface for employees to submit workplace concerns through the Service Portal. The submission form uses a Record Producer to collect the required information and generate an Employee Issue record.

The solution includes structured form fields, validation rules, UI Policies, and Category–Subcategory relationships to ensure that the submitted information is properly captured and organized.

Release Version

Version 1.0

Verification Period

19 August 2026 to 25 August 2026

Validation Coverage

The following areas were verified during testing:

- Accessing the issue submission service from the Service Portal.
- Opening and using the Employee Issue Record Producer.

- Entering the requester information.
- Selecting an appropriate issue category.
- Displaying the relevant subcategories based on the selected category.
- Checking the Category–Subcategory relationship.
- Verifying the State field behaviour.
- Entering and validating the Short Description.
- Submitting the completed form.
- Confirming creation of the Employee Issue record.
- Checking configured UI Policies and field-level restrictions.

Requirement Verification

US-01: As an employee, I want to open the workplace issue service through the portal so that I can submit a concern conveniently.

US-02: As an employee, I want to enter the necessary issue information so that my request is stored in an organized format.

US-03: As an employee, I want the Subcategory choices to change according to the selected Category so that the classification remains relevant.

US-04: As an employee, I want the form to check required information before submission so that incomplete requests are prevented.

US-05: As an employee, I want my submitted request to generate an Employee Issue record so that it can be processed and tracked in ServiceNow.

Test Setup

Application Location

ServiceNow Service Portal – Employee Issue Submission Service

User Access

An authenticated ServiceNow user with the required access to the Service Portal and Employee Issue Record Producer is used for verification.

Submit Issue

Test Case ID	Validation Area	Test Procedure	Expected Behaviour	Observed Behaviour	Result
TS-01	Portal service availability	1. Sign in to the ServiceNow portal. 2. Locate the workplace issue option. 3. Launch the submission page.	The issue submission interface should load with the configured fields and controls.	The submission interface loaded correctly with all configured controls visible.	Pass
TS-02	Valid issue submission	1. Open the issue form. 2. Enter a valid employee/re requester.	The form should accept the information and generate an issue entry.	The information was accepted and an issue entry was generated successfully.	Pass

		3. Select the required classification values. 4. Enter the issue description. 5. Submit the request.			
TS-03	Dependent selection behaviour	1. Open the submission form. 2. Choose an issue category. 3. Expand the related subcategory field. 4. Review the available choices.	Only subcategories related to the selected category should be available.	The displayed subcategory choices changed according to the selected category.	Pass
TS-04	Mandatory description check	1. Open the issue form. 2. Leave the description blank. 3. Keep the configured initial state. 4. Try to submit the request.	The system should identify the missing description and stop the submission.	Submission was prevented until the required description was entered.	Pass
TS-05	Submission after validation	1. Open a new issue form. 2. Enter a valid description. 3. Complete the other required fields.	Once all required information is supplied, the request should be processed successfully.	The validation conditions were satisfied and the issue record was created.	Pass

		4. Submit the request.			
TS-06	Data transfer verification	1. Submit a request using identifiable test values. 2. Open the generated issue entry. 3. Compare the submitted values with the stored values.	Values entered through the form should appear in their corresponding backend fields.	The submitted values were stored correctly in the corresponding fields	Pass
TS-07	State value verification	1. Launch the issue form. 2. Review the configured state value. 3. Submit the request. 4. Check the generated issue entry.	The configured state should be carried into the created issue record.	The expected state value was retained in the generated record.	Pass
TS-08	Record generation check	1. Complete and submit an issue request. 2. Open the Employee Issue records area. 3. Search for the newly submitted entry.	A new issue record should be available with the submitted information.	The newly generated issue entry was available with the expected details	Pass

The screenshot shows a web form titled "Employee raises issue" with the ID "EMP0001015". The form contains the following fields:

- Number: EMP0001015
- * Requester: Fred Luddy
- Category: Hardware
- Subcategory: Laptop
- * Short Description: Test Case TC-006
- State: New
- Priority: Medium
- Assignment Group: Hardware

At the bottom of the form, there are "Update" and "Delete" buttons, and a link for "SN Util/ Versions ID".

Defect Review and Approval

Defect Status

No functional defects were identified during the executed verification scenarios. All tested features produced the expected results.

Defect Status: No Open Issues

Verification Approval

Tested By: Pandla Srilakshmi Mounika

Verification Date: 25 August 2026

Approval Signature: Mounika P

Testing Remarks

- Functional and validation scenarios were reviewed during testing.
- Both successful submissions and invalid-input conditions were considered.
- Any future issue should be recorded with its description, impact, reproduction steps, and current status.
- Final approval can be obtained after the completed test results are reviewed.

Overall Verification Result: Passed
