

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	25 August 2026
Project	Employee Raise Issue – Record Producer & Service Portal Integration
Marks	4 Marks

Functional Requirements:

The following non-functional requirements define the expected quality, protection, operational behaviour, and future extensibility of the proposed Employee Issue Management solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-01	Employee Request Submission Interface	Provide a centralized portal option through which employees can initiate and submit workplace-related concerns.
FR-02	Workplace Concern Data Entry	Collect employee identification and relevant issue attributes, including classification, status, and a brief description, using Record Producer inputs.
FR-03	Form Rules and Data Quality Control	Implement dependent field behaviour and submission checks to ensure that employees provide valid and complete issue information before processing.
FR-04	Backend Issue Record Generation	Process validated form inputs, map them to the appropriate custom-table fields, and create a persistent Employee Issue record in ServiceNow.

Non-functional Requirements:

The following non-functional requirements define the expected quality, protection, operational behaviour, and future extensibility of the proposed Employee Issue Management solution.

NFR NO	Requirement Area	Expected Behaviour
NFR-01	Accessibility & Ease of Use	Employees should be able to understand and complete the issue submission form with minimal navigation and without requiring knowledge of the underlying ServiceNow data model.
NFR-02	Authorization & Confidentiality	Only users with appropriate permissions should be able to access, submit, view, or manage employee issue information as defined by the application's security configuration.
NFR-03	Consistency & Accuracy	Information submitted through the portal should be transferred consistently to the corresponding system records without unintended loss, duplication, or alteration of configured values.
NFR-04	System Responsiveness	Form loading, dependent-field updates, validation, and record submission should operate within reasonable response times during expected user activity.
NFR-05		Authorized employees should be able to use the issue-reporting service whenever the supporting ServiceNow Service Portal and required application components are operational.
