

Project Design Phase-II

Data Flow Diagram & User Stories

Date	25 August 2026
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration
Maximum Marks	4 Marks

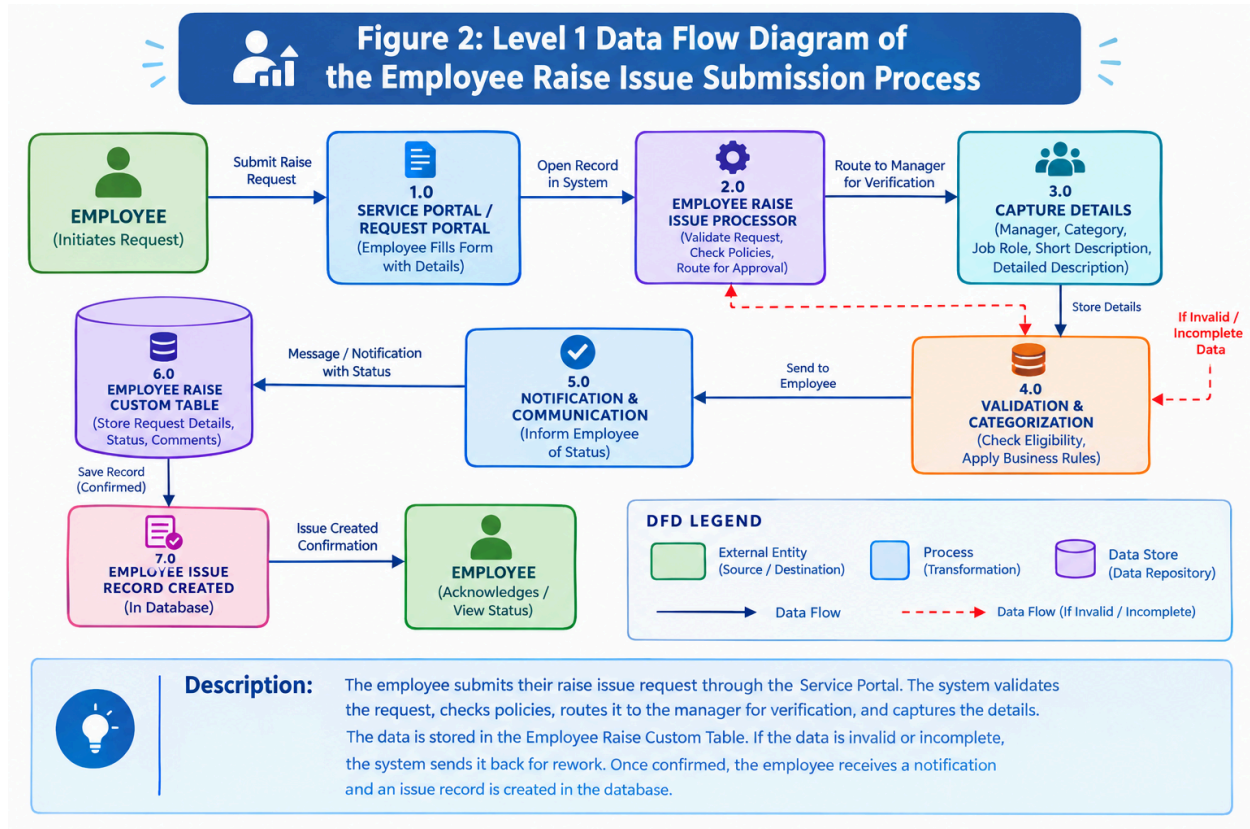

Data Flow Diagrams:

A Data Flow Diagram (DFD) serves as a clean graphical blueprint that maps the entire lifecycle of information moving through a system. It simplifies complex software requirements into an easily readable visual layout.

User Stories – Employee Workplace Issue Management:

The following user stories describe the functional behaviour of the Employee Workplace Issue Management application. The stories cover the activities performed by employees while reporting an issue and the administrative controls required to process and maintain submitted requests.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Issue Reporting Portal	US-101	As an employee, I want to locate and launch the	The issue-reporting option is available in the	High	Release 1

			workplace issue reporting service from the Service Portal so that I can report a concern without navigating through multiple applications .	employee portal and opens the configured issue submission form successfully .		
Employee	Employee Identification	US-102	As an employee, I want my employee details to be captured with the request so that the submitted issue can be traced to the correct requester.	The requester can be selected from valid employee records, and the selected employee information is carried into the generated issue record.	High	Release 1
Employee	Issue Categorization	US-103	As an employee, I want to classify my workplace concern using suitable issue categories so that the support team can understand the nature of the request.	The available subcategories change based on the selected category, and only valid category–subcategory combinations can be submitted.	High	Release-1
Employee	Issue	US-104	As an	A Short	High	Release-1

	Details		employee, I want to enter a concise summary of my workplace concern so that the receiving team can quickly identify what assistance is required	Description field is available on the form. The field becomes mandatory when the issue is submitted in the configured New state.		
Employee	Request Registration	US-105	As an employee, I want the completed form to be submitted and registered in the system so that I receive a formal record of my workplace concern.	When all required information is valid, submission completes successfully and a new Employee Issue record is generated in the application table.	High	Release-1
Administrator	Form-to-Table Integration	US-106	As an administrator, I want information entered through the issue form to populate the appropriate backend fields so that no submitted information is lost or stored incorrectly	Each configured form variable is associated with the correct field in the Employee Issue table, and submitted values appear correctly on the created record.

Administrator	Business Rule Enforcement	US-107	As an administrator, I want form-level controls and validation rules to prevent incorrect submissions so that the application receives complete and meaningful issue information.	Configured UI Policies, field restrictions, dependent selections, and mandatory-field rules operate as intended before a request can be submitted.	High	Release-1
Administrator	Issue Record Administration	US-108	As an administrator, I want every submitted workplace issue to be maintained as a structured record so that requests can be reviewed, assigned, updated, and tracked throughout their lifecycle.	Each successful submission receives a unique issue number and stores the configured requester, category, subcategory, description, state, priority, and assignment details.	High	Release-2
