Project	Employee Raise Issue – Record Producer & Service Portal Integration
Marks	2 Marks

Problem–Solution Fit

The Employee Raise Issue application addresses the difficulty employees may face when reporting workplace concerns through a structured and centralized process. Instead of depending on informal communication or different channels, employees can submit their issues through a dedicated ServiceNow interface.

Objective:

- ☐ Provide employees with a single and organized channel for registering workplace-related concerns.
- ☐ Reduce the effort involved in reporting an issue by using a simple and guided submission form.
- ☐ Ensure that important information such as requester, category, subcategory, and issue description is captured in a consistent format.
- ☐ Improve the handling of employee concerns by converting submitted requests into structured ServiceNow records.
- ☐ Support administrators in reviewing, tracking, assigning, and managing employee issues efficiently.
- ☐ Create a foundation that can be extended with additional categories, validations, and employee-support services in the future.

Problem–Solution Fit Canvas – Employee Workplace Issue Management

Problem–Solution Fit

1. CS — TARGET USERS

Main Users:

Employees who require a reliable way to register workplace concerns, service requests, or internal support-related problems.

Supporting Users:

HR personnel, administrators, and responsible support teams who review and process submitted employee requests.

2. J&P — USER NEEDS / TASKS

- Submit a workplace concern through a single interface.
- Enter the necessary information without unnecessary complexity.
- Classify the request according to its nature.
- Ensure the submitted request is converted into a proper system record.

- Enable support personnel to work with the request in an organized manner.
-

3. TR — INITIATING EVENTS

- An employee encounters an internal service problem.
 - A workplace request requires attention from a responsible team.
 - Employee information needs to be formally recorded.
 - A clarification or support action is required.
 - An issue needs to be registered for further processing.
-

4. EM — USER EXPERIENCE

Before Using the Application:

- Unsure which method should be used to register the concern.
- May need to explain the same issue through repeated communication.
- Difficult to know whether all required details have been provided.
- Limited awareness of what happens after reporting the concern.

After Using the Application:

- Can submit the concern through a defined workflow.
 - Required information is presented in an organized form.
 - Request information is stored as a structured record.
 - The issue can be handled through the ServiceNow environment.
-

5. AS — CURRENT APPROACHES

Employees may currently depend on:

- Email-based requests.
- Direct conversations with HR or support personnel.
- Internal communication applications.
- Manual forms or organization-specific request processes.

Observed Gap:

These methods may result in inconsistent information, repeated communication, limited standardization, and difficulty maintaining a single record for each workplace concern.

6. CC — USER / PROCESS LIMITATIONS

- Different employees may use different reporting methods.
 - Required issue information may not always be provided together.
 - Manual communication can increase processing effort.
 - Categorizing requests consistently can be difficult.
 - Request information may be distributed across multiple communication channels.
-

7. BE — TYPICAL USER ACTIONS

- Identifies the workplace concern.
 - Searches for an appropriate way to report it.
 - Communicates the issue to the relevant department.
 - Provides additional details whenever required.
 - Waits for or requests an update from the responsible team.
-

8. CH — INTERACTION CHANNELS

Digital Channels:

- Employee Service Portal
- Email
- Internal communication tools
- Organization-specific service platforms

Direct Channels:

- HR interaction
 - Support-team communication
 - Department-level discussions
-

9. RC — UNDERLYING ISSUE

The primary challenge is the **lack of a unified mechanism for collecting and organizing employee workplace concerns.**

When requests are handled through multiple methods, information can be recorded in different formats. This makes it harder to maintain consistent classification, create structured records, and manage requests systematically.

10. SL — PROPOSED SERVICE:

ServiceNow Employee Workplace Issue Management

The proposed application provides a dedicated ServiceNow-based process for registering employee concerns.

- Offers a dedicated submission page through the Service Portal.
- Uses a Record Producer to collect request information.
- Stores submitted details in the Employee Issue custom table.
- Controls related selections such as Category and Subcategory.
- Applies field validation and submission rules.
- Generates structured records for further administration.
- Provides a consistent process for handling employee workplace concerns.

Problem–Solution Fit:

The proposed ServiceNow application provides a structured and centralized way to transform employee workplace concerns into manageable digital records, reducing reliance on scattered communication methods and improving consistency in issue handling.
