

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	25 August 2026
Project	Employee Raise Issue – Record Producer & Service Portal Integration
Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Technical Architecture – Employee Workplace Issue Management:

The Employee Issue Management application is developed entirely on the ServiceNow platform. Employees access the service through the Service Portal and submit their concerns using a configured Record Producer.

The entered details are validated using UI Policies and Category–Subcategory dependency rules and then mapped to the Employee Issue custom table. The submitted records are stored within ServiceNow.

The solution does not require any third-party APIs, external databases, or machine-learning services.
